UNITED STATES DEPARTMENT OF AGRICULTURE  
FARM SECURITY ADMINISTRATION  
HEALTH SERVICES PROGRAM  
Activities of County, District and State Units  
January - March, 1943

Resume of Membership Totals as of March 31, 1943.

	<u>Units</u>	<u>Counties</u>	<u>Families</u>	<u>Persons</u>
Physicians' and Surgeons' Service only or in connection with other types of service	829	1072	101,507	538,040
Hospital Service only	12	63	4,558	25,742
Physicians' and Hospital service	841	1135	106,065	563,782
Less physician and hospital *duplications	5	17	1,642	7,746
Total physician and hospital service		1118	104,423	556,036
Dental service only	235	261	32,755	171,725
Physicians' hospital and dental	1076	1379	137,178	727,761
Less dental *duplications	173	189	25,814	135,302
U. S. Total		1190	111,364	592,459

\*In counties having two or more separate units offering different types of service, the membership of the smaller unit or units has been deducted on the assumption that these families also hold membership in the larger or largest unit.

Extent of Program

At the end of March 1943, the FSA health services program had

1076 units in  
1190 counties in  
42 states with  
111,364 families and  
592,459 persons holding membership.

This represents an increase during the quarter in number of units and number of counties represented in the program but the decrease in membership, noted during the latter half of 1942, still continues. The changes in number of units, counties and member-families for each type of service and for all services are shown below:

<u>Physicians' Service</u>				<u>Hospital Service</u>		
	<u>Units</u>	<u>Counties</u>	<u>Families</u>	<u>Units</u>	<u>Counties</u>	<u>Families</u>
Mar. 31 '43	829	1072	101,507	12	63	4,558
Dec. 31 '42	825	1059	109,408	10	16	2,379
	+ 4	+ 13	- 7,901	+ 2	+ 47	+ 2,179
<u>Dental Service</u>				<u>All Services (omitting duplications)</u>		
	<u>Units</u>	<u>Counties</u>	<u>Families</u>	<u>Units</u>	<u>Counties</u>	<u>Families</u>
Mar. 31 '43	235	261	32,755	1,076	1,190	111,364
Dec. 31 '42	227	253	32,384	1,062	1,131	116,631
	+ 8	+ 8	+ 371	+ 14	+ 59	- 5,267

These totals indicate that the loss of membership is entirely among units offering

physicians' and related services. The loss of 7,901 families by units offering this service is countered by gains of 2,179 families in units offering hospital service and 371 families in units offering dental service. However, some of these gains are among families who are already participating in the program in other groups and the net loss is shown to be 5,267 families.

The fact that this loss in membership of units offering physicians' and related services is accompanied by a gain in the number of units and counties represented indicates that it is due to loss of membership among units continuing in operation rather than to the discontinuation of entire groups. This conclusion is confirmed by a comparison of the December membership of the 16 units discontinued during the quarter and the March membership of the new units added during the quarter. The discontinued units accounted for a loss of 1751 families but the new units brought in 2425 new families, or 674 more than were lost. This indicates that units continuing in operation lost a total of 8,574 families or eight percent of their membership at the beginning of the quarter. The same is true with reference to dental and hospital units. Dental units show a net gain in membership of 371 families but the eight new dental units, added during the quarter, brought in a membership of 714 families. This indicates a loss by the units already in operation of 343 families or one percent of their enrollment. The membership of the two new units offering hospital service was 2372 families and the net gain for this type of unit was 2,179 families indicating a loss of 193 families or eight percent of their membership by the units already in operation.

The gain among units offering hospital service represents the addition of two 24-county units in North Carolina, and dropping of one county from a hospitalization group in New York. The two North Carolina units are being served by two Blue Cross associations and represent the most extensive collaboration with the Blue Cross plans thus far undertaken by FSA groups. Thirty-six of the 48 counties represented by these units are counties in which no other medical care groups were in operation in March and they account for most of the gain of 59 in the number of counties in which the program is in operation.

### Services Reported

The totals of approved charges and rates covering charges and services for units operating on a fee-for-service basis, shown in Table 2, are based on data from units which submitted reports for January, February and March. The membership of these reporting units constitutes the following percentages of the total membership in the indicated groups.

	<u>January</u>		<u>February</u>		<u>March</u>		<u>Average</u>
	<u>Member-</u> <u>families</u>	<u>Per-</u> <u>cent</u>	<u>Member-</u> <u>families</u>	<u>Per-</u> <u>cent</u>	<u>Member-</u> <u>families</u>	<u>Per-</u> <u>cent</u>	<u>Per-</u> <u>cent</u>
Physicians' service alone or with other services	77,132	75.1	77,437	74.8	73,062	72.0	73.9
Hospital service only	1,587	58.9	2,642	74.6	4,558	74.6	69.3
Hospital service combined	42,219	69.7	40,581	70.5	41,433	65.9	68.7
Dental service only	19,086	58.5	22,042	61.5	19,554	59.7	59.9
Dental service combined	11,021	75.7	11,096	77.1	10,559	75.2	76.0
Drug service	31,760	76.0	29,577	76.6	28,931	69.7	74.1

### Physicians' service

As is to be expected during the winter season, the volume of physicians' and surgeons' service is slightly larger than it was during the previous three months. Calls were made at the rate of 110 per thousand persons per month as compared with a rate of 101 per thousand persons per month during October, November and December, and charges for physicians' and surgeons' service during this period averaged 33 cents per person eligible for such service as compared with an average of 29 cents for the previous three months.

When these rates for January, February and March are compared with the corresponding rates for January, February and March 1942 however, they show a reduction in volume of physicians' and surgeons' service of 12 or 15 percent. Office and home calls were made during this first quarter of 1943 at the rate of 105 per thousand persons per month, whereas, in the same months of 1942 the rate was 121 office and home calls per thousand persons per month, a reduction of 16 calls or 15 percent. The charges submitted during the 1943 period averaged 33 cents per person eligible for service whereas in the corresponding period of 1942 they averaged 37 cents, a reduction of 12 percent. Similar reduction in volume of physicians' and surgeons' service as compared with that during corresponding months of the previous year has been noted in two previous reports. It is apparently characteristic of the service since July or August 1942.

### Hospital Service.

The percentage paid by units offering hospital service only on charges for service during this quarter was 96.6 per cent and the volume of service was 16 days of hospitalization per thousand persons per month. Units offering hospital service in combination with physicians' service report payments on charges for hospital service averaging 84.6 percent and services averaging 27 days of hospitalization per 1000 persons per month.

### Recent Experience in Group Hospitalization.

In view of the special attention which is being given the development of hospital service groups in a number of regions, significant information on the activities in the field of hospital service of a number of associations has been brought together in Table 1. Six of the associations included are the special county associations sponsored by the Interbureau Coordinating Committee on Post-War Programs. These associations include all farm families without income limitation in their membership though they have a preponderance of low-income families. The other seven associations listed are for FSA borrower-families. In selecting the associations to be listed, an effort was made to include associations which are typical of different sections of the country. For some of the associations the period covered is as brief as six months, while for others it is as much as two years. If the period covered for any association is more than a year however, two lines are given to the record with separate rates for each of the two parts into which the period is divided. The division is made at the end of the association's fiscal year.

Table 1. Recent experience in group hospitalization (1) among FSA borrower families and (2) in six special county associations for all farm families, sponsored by the Interbureau Coordinating Committee on Post-war Programs.

Association	Period Covered		Average Membership		Family(a)	Total Charges	Percent Paid	Charge		Rate per 1000

(a) Exclusive of charges for administration, except for the 3-county association in New York.

(b) Part of general medical care plan with no separate allotment for hospitalization. Hospital bills paid in full as preferred bills each month.

(c) Includes charges of \$245 or \$1.08 per family which were paid in the form of extra charges by the families due to the regulation that dependents pay one dollar per day extra when in the hospital.

The information which will likely be found most useful as an aid in planning other associations is that found in the column on the right margin showing numbers of days of hospitalization per 1000 persons per year. It will be noted that this rate varies widely from 130 days for the three-county group in Arkansas to 733 days for the Pierre District Association in 1941-42. A major factor in accounting for this variation is geographic location. Other notable factors are limitations on the service offered, availability of physicians' and surgeons' service and income status of the group. The two units showing the highest hospitalization rates, the Pierre District Association and the Wheeler County Association, emphasized hospitalization rather than home calls for cases which were not able to come to the physicians' office. This represents an accentuation of the rather general tendency in this direction in sparsely settled western areas where the physician has to travel long distances to make home calls. In addition these two associations also followed the policy of hospitalizing all obstetrical cases. The Pierre District Association's lower rate shown for the year 1942-43, is accounted for at least in part, by a relaxation of its policy of hospitalizing all non-ambulatory cases and a trend toward hospitalizing only complicated obstetrical cases.

The three-county group in Arkansas aimed during this first year of operation to continue to provide the emergency hospitalization which the members had been receiving before the plan was instituted. The difference between the rates for this group and for the Nevada County Association which is also in Arkansas, are accounted for in part by the fact that the Nevada County group includes persons of higher income levels who are more accustomed to the use of hospital service and more particularly to the fact that the Nevada County Association also offers physicians' and surgeons' service and does not limit its hospitalization program strictly to emergency care.

The limitation in volume of service, in the different groups listed, ranged from 14 to 21 days per case and did not seem to be a major factor in accounting for the differences in demand for service. The average number of days per case for the different groups ranged from three to nine days and tended to be lower for the six associations offering a less limited type of service to all farm families.

The other major factor, in addition to volume of service, which determines the average charge per family per year is the charge per day for hospitalization. The average charge per day, shown in Table 1, is estimated with all incidental charges payable by the association, such as charges for drugs, Xrays, operating room and laboratory service, included. The wide variation in this rate for the different groups is accounted for in part by the variation in the charges for these extra services though the basic rate for ward care also varies widely from region to region.

The average charge per family per year ranges from \$2.02 to \$17.47 with a median of \$9.44. This wide variation is due to the variations already discussed in demand for service and in the charge per day for hospital care.

Table 2. Activities of the FSA health service program through county, district and state units based on reports of units for the quarterly period January through March, 1943

- a/ Payments by units operating on a Capitation basis.
- b/ Membership totals for these units have been taken from reports for months other than December.
- c/ These units pay no more than fifty percent on charges at the end of each month or quarter, delaying further payment until the end of the year. The entry under Per cent paid for these units is the estimated percentage which could be paid if all funds available for payment of bills this month were distributed.
- d/ Total of members (persons) on the basis of which these rates have been estimated include the membership of all reporting units which offer hospital service regardless of whether or not hospital service was reported as having been rendered this month. For units in each state reporting hospital charges without reporting the number of days hospitalized, the number of days has been estimated by determining the cost per day for the days for which charges are reported. This average cost per day is then used in computing the number of hospital days for those units reporting charges only. For states having no units reporting number of days of hospitalization, no rate is given.
